Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicants provided additional detail of the invention regarding 3-D aspects in a gaming environment. Applicant's discussion covered more detailed game specifics regarding the use of a virtual camera for capturing different possible 3-D perspectives while viewing 3-D gaming reels in a slot machine. The perspectives provided by the virtual camera can be used for capturing symbols to create a payline. Examiner agrees that such language specifying virtual cameras to provide the "captured" image to display to a user would distinguish over the prior art of record. It is in view of Nakano in view of Horvitz provides a 3-D interface to display game renderings, but does not provide for use of virtual cameras to render different game perspectives. Such amended language will need a formal submission for proper consideration and will require a further search.
